FLORIDA COUNTY PERSPECTIVES

EASY TO USE INFORMATION

Lowest Population:	LIBERTY
Most People Per Square Mile:	PINELLAS
Lowest Percent of People Age 65 and Over:	UNION
Highest Percent of Black Republicans:	GADSDEN
Most Teachers With Advanced Degrees:	ALACHUA
Most Land in Farms:	OSCEOLA
Highest Percentage of Veterans:	CITRUS
Fewest Traffic Citations:	GILCHRIST
Highest Millage Rate:	BAKER
Highest Teacher Average Salary:	DADE
Most Lawyers per 1,000 Population:	LEON
Youngest Farmers:	GULF
Highest Percent of High School Graduates Entering Technical School:	JEFFERSON

P.O. Box 6381 Athens, Georgia 30604 404-548-8460

Dear Reader,

This edition marks the fourth year of Florida County Perspectives. The information used to produce the book was collected from the annual reports of over twenty different federal and state agencies. The purpose of the publication is to allow the reader to gain an increased understanding of one or all 67 of Florida's counties.

If you have any comments or suggestions about new data sources or how we can improve the contents or format, please let us know.

HOW TO USE THIS BOOK

Understanding the dynamics of community growth and change is critical to planning effective business and government programs regardless of the nature of the area. The first step in the process, however, involves locating useful information. Incorporating statistical information into the research and planning process is important because contemporary communities are influenced by a growing number of agricultural, industrial, commercial and international forces. Every community, be it rural, suburban or urban is continually changing. Even modest changes such as aging affects communities because older citizens have different spending habits, health needs and voting patterns than younger residents.

Effective planning can be conducted using pre-existing or secondary data sources. A vast amount of information is regularly collected by numerous federal, state and private agencies such as the Census Bureau, Vital Statistics Department, Department of Agriculture, Labor Department, Department of Education, utility companies and others. These sources, covering a multitude of subjects, are available for all 3,141 of the nation's counties. They are presented in a variety of different printed and computerized formats. With a modest amount of effort, planners can access and utilize literally tens of thousands of useful facts and figures.

The key to this method involves putting the information into a useful format so that it can be interpreted and used in a constructive manner. Most of the data that is collected and published is produced on a county basis. Using county-level information may seem unwarranted to some, but it is the primary unit of federal and state government data analyses.

The role of the county in governmental and community affairs has a long tradition in the United States and stems from our adoption of English legal customs. In some areas of the country the importance of the county was minimized by the development of large cities in the late 1800 and early 1900's, but by the 1950's, with the expansion of suburban areas and the development of metropolitan regions, the county became the basic unit by which Metropolitan Statistical Areas are delineated.

For many researchers and planners alike the county has long been the effective unit of research and program delivery. The objection to considering the county as a unit of analysis occurs because several difficulties exist with equating the county with a community. Because the information is aggregated, it may present some problems in communities that are at the edge of a county, where several communities make up a county, or where people live in one county but work in another. When this occurs, the scope of the study should be expanded to include pertinent facts from the surrounding area. In addition, county residents frequently lack a feeling of unity that many researchers feel is necessary for a true community. Finally, some community scholars believe that an actual community does not have formal boundaries. The importance of the county, however, can be justified by the fact the Census Bureau and a myriad of other federal and state agencies routinely gather and publish a tremendous amount of county level data.

The major limitation with using government generated secondary data sources are that they are frequently several years old before they become available. The information, however, can be useful is several points are kept in mind. First, most counties do not experience large increases or decreases over a short time period. When rapid change does occur, it is often due to the opening of a large factory or the construction of major facility such as a power plant, military installation or public works project.

By using county level data and comparing it to state or national average an accurate picture of an area can be obtained. For example, per capita income estimates are developed for counties by the Bureau of Economic Analysis, but they are notoriously out of date. They can, however, be made quite useful if they are compared to the state, regional and national average. Structural changes such as increases in income or education do not occur over night and as a resu. if the data is properly used it can still yield useful insights into the planning process.

The information in Florida County Perspectives represents the beginning step in the planning process. The book can be used in a number of different ways. First, it provides an illustration of what types of data are available. Second, it allows the reader to quickly build a composite social, economic and demographic profile of a particular county. Third it permits comparison between individual counties and the state average. Finally, it allows the reader to see historical trends develop. Each year's book was developed to complement the previous edition and the 1987, 1988 and 1989 editions are available for $10.00.

All of the information in the book has been computerized for more detailed statistical analysis and is available in a Lotus format for $100.00.

TABLE OF CONTENTS

AGRICULTURE **1-3**
- Farms, Farm Size, Age of Farm Operator 1
- Land in Farms, Harvested Cropland, Irrigated Land 2
- Proportion of Land in Farms, Map 3

CRIME **4-9**
- Arrests 4
- Full Time Law Enforcement Employees 5
- Incarcerated Offenders 6
- Offenses Reported 7
- Offenses Reported, Graph 8
- Crime Rate, Map 8
- Probationers/Parolees 9

ECONOMICS **10-19**
- Business Establishments and Employees 10
- Establishments by Industry 11-12
- Establishments by Industry, Graph 13
- Millage Rates 14
- Per Capita Income 15
- Per Capita Income, Graph and Map 16
- Total Personal Income 17
- Transfer Payments 18
- Transfer Payments, Graph 19

EDUCATION **20-26**
- Education Levels 20
- Education Levels, Graph 21
- Percent of Population Completing College, Map 21
- Public Elementary & Secondary Schools:
  - Enrollment 22
  - Funding and Funds Expenditure 23
  - Graduates, Dropouts, Non-Promotions 24
  - Salaries 25
  - Selected Staff Characteristics 26

GOVERNMENT **27-31**
- Registered Voters:
  - Democrats 27
  - Democrats and Republicans, Maps 28
  - Other Parties, Unaffiliated, Precincts 29
  - Republicans 30
  - Total Number and Election Results 31

HEALTH **32-40**
Accidental Death, Suicide, Homicide 32
Cancer and Heart Disease, Maps 33
Leading Causes of Death 34-35
Leading Causes of Death, Graph 36
Hospitals and Nursing Homes 37
Licensed Health Professionals 38-40

HOUSING **41-47**
Housing Characteristics 41
Housing Units Authorized in Permit-Issuing Places 42-47

LABOR **48-50**
Commuters 48
Labor Force Summary 49
Unemployment Rates, Graph and Map 50

NATURAL RESOURCES **51-56**
Land and Water Area, Population Density 51
Population Density, Graph 52
Timberland by Stand-Size Class and Land Class 53
Timberland by Forest-Type Group 54
Timberland by Ownership Class 55
Total Forest Products Income 56

OCCUPATIONS **57-62**
Civilian Labor Force by Industry 57-59
Employed Persons by Occupation 60-61
Lawyers 62

POPULATION **63-86**
Age:
0-64, Median Age 63
Age, Graph 64
65 and Over 65
65 and Over, Graph and Map 66
Components of Change, Net Migration 67
County Seat, Incorporated and Unincorporated 68
Households 69
Location of Municipalities by County 70-71
Municipalities 72-77
Race and Sex:
Black 78
Other Races, Spanish Origin, Sex 79
White 80

POPULATION (Continued)
Total Population:
Change in Total Population, Maps 81
Estimates and Projections 82
Percent Change 83
Total Population 84
Total Population Growth, Graph 85
Veterans 86

SOCIAL INSURANCE AND WELFARE 87-90
Aid to Families with Dependent Children 87
Food Stamps Issued 88
Social Security Beneficiaries 89
Total Assistance, Supplemental Security Income 90

TRANSPORTATION 91-99
Alcohol Related Traffic Fatalities 91
Alcohol Related Traffic Fatalities, Map 92
Centerline Miles and Daily Vehicle Miles Traveled 93
Revenue 94-95
Tags 96-97
Traffic Citations and Licensed Drivers 98
Traffic Fatalities and Accidents 99

VITAL STATISTICS 100-105
Deaths 100
Infant Deaths 101
Live Births 102
Live Births to Unwed Mothers 103
Marriages and Divorces 104
Marriage and Divorce Rates, Maps 105

SELECTED COUNTY RANKINGS 106-110
Agriculture and Crime 106
Economics and Education 107
Government, Health and Labor 108
Population 109
Social Insurance and Vital Statistics 110

NOTES 111-112

SOURCES 113-117

* Metropolitan County

[1] See Notes

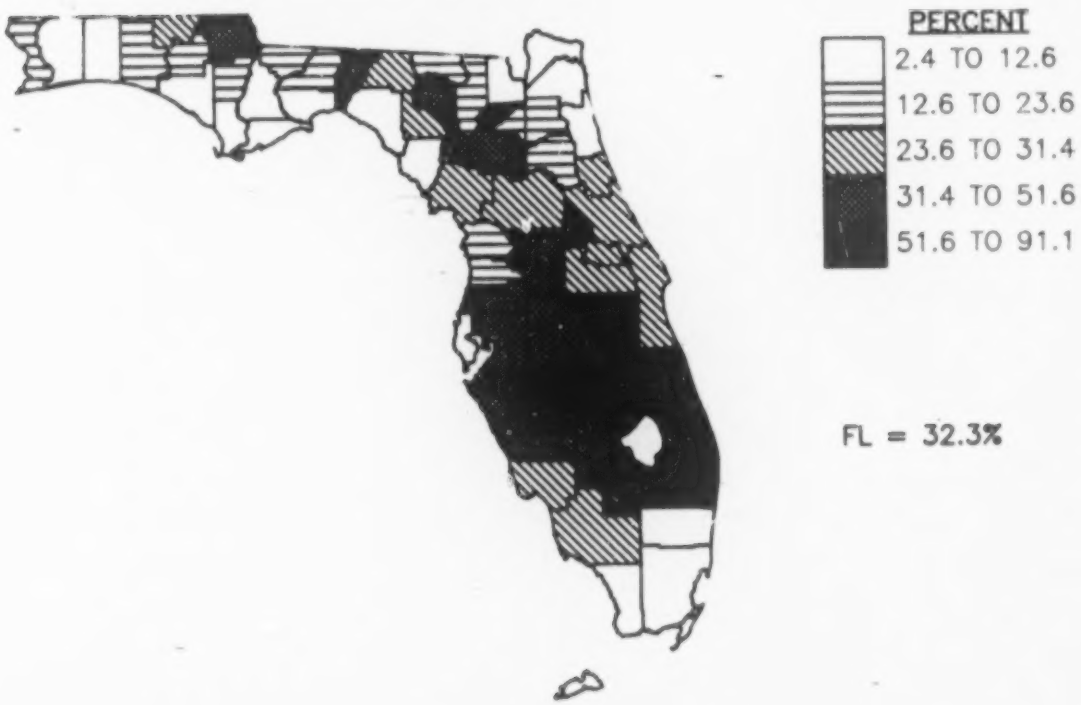
[2] Rank 1 = highest (range 1-64)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

--Data withheld to avoid disclosure of information about individual farms.

PROPORTION OF LAND IN FARMS

1987



Agriculture has undergone tremendous changes since World War II. Over the past five decades increased mechanization, the use of improved varieties, expanded markets, chemical fertilizer, insecticides and pesticides have transformed the production of food and fiber. Using the products of science and technology innovative farmers have changed American agriculture from a small scale, labor intensive business into a capital intensive, market driven, corporate enterprise.

The changing nature of agriculture has played a major role in shaping many of the South's demographic, economic and political trends. For example, the mass movement of people from rural to urban areas that began in the late 1920's was chiefly the result of the mechanization of agriculture which dramatically decreased the high dependence on farm labor. The boll weevil also played a role by its devastating effect on cotton, further reducing the need for a large rural labor force.

Agriculture in Florida, however, is in transition. The number of farms and proportion of land in farms has steadily declined. This decline has been influenced by a number of social and economic factors. Among these are advances in agricultural production, mechanization, a shift toward livestock enterprises and the development of off-farm employment. Urban sprawl and suburban growth also have contributed to this trend. Advances in transportation and communication, as well as non-farm employment opportunities, have made it possible for many people to live in rural areas without depending on agriculture for their livelihood.

Not only is the state losing farms but the proportion in of land in farms as well continues to decline. Reasons for the recent decline in farm land involve a combination of economic and changing policy issues. In the decade of the 1980's farmers witnessed low prices, high interest rates, international grain embargoes, increased foreign competition, unpredictable policies and record droughts. In addition, overproduction from improved practices and the adoption of the conservation reserve program which encouraged farmers to plant trees on highly erodible farm land. These factors all contributed to the reduction of farm land.

Rapid urban development, particularly suburbanization, has important implications for the state's agricultural industry. Questions of land use planning, water allocation, pesticide and insecticide handling, storage and disposal and taxation issues will all come into play as suburban development continues to encroach into agricultural areas.

* Metropolitan County

1 The data shown in this table is by geographic jurisdiction and is not intended to depict an individual law enforcement agency's activities.

2 Rank 1 = lowest (range 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

* Metropolitan County

1 As of June 30 for each year

2 Rank: 1 = lowest (range, 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

3 Supervised Conditional Release Program

* Metropolitan County

[1] An establishment is a single physical location where business is conducted or where services or industrial operations are performed.

[2] Employment is the count of employees during the pay period that includes March 12, as reported on Internal Revenue Service Form 941, or as corrected by estimates in those cases where it was incompletely or improperly reported.

* Metropolitan County

[1] An establishment is a single physical location where business is conducted or where services or industrial operations are performed.

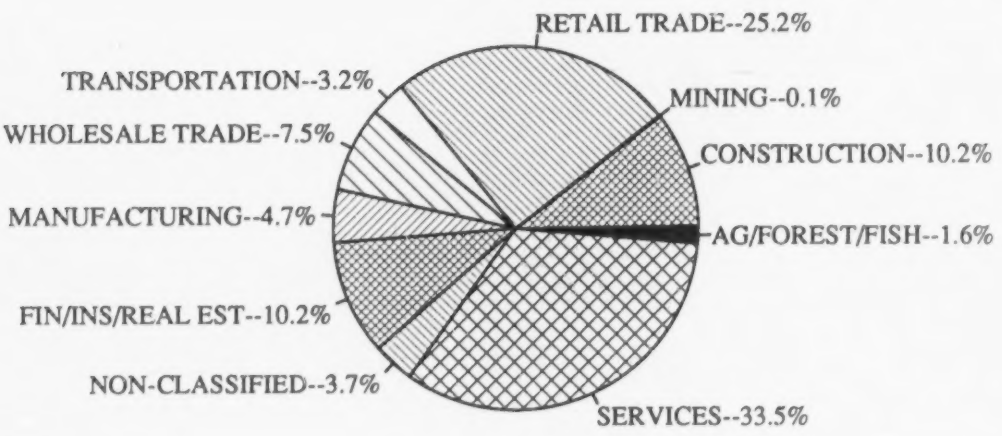
[2] See Notes

[3] Rank: 1 = highest (range, 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

ESTABLISHMENTS BY INDUSTRY
1987



TOTAL ESTABLISHMENTS
335,784

The information in this chart shows the number of firms in Florida on a percentage basis. In 1987 there were 335,784 business establishments in the state. An establishment is defined as a single location where business is conducted or where services or industrial operations are performed.

Service firms occupy the largest category of business establishments representing a little over one-third of all firms in the state. Comprising one-quarter of all establishments, retail trade is the second largest sector. Financial and real estate and construction establishments are tied for the third largest sector, with each representing a little over ten percent. Agriculture, forestry and fisheries account for less than two percent and mining represents less than one percent of all of the business enterprises in the state.

A diversified economy, plus a well developed service economy is responsible for the state's low overall unemployment rate (a 5.6 annual average in 1989). States such as Texas, Louisiana, West Virginia and Oklahoma whose economies are highly dependent on single, natural resource based commodities, have paid the price for relying on a single enterprise.

* Metropolitan County

[1] Rank 1 = highest (range 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

ECONOMICS

TRANSFER PAYMENTS: 1982-1987 [1]

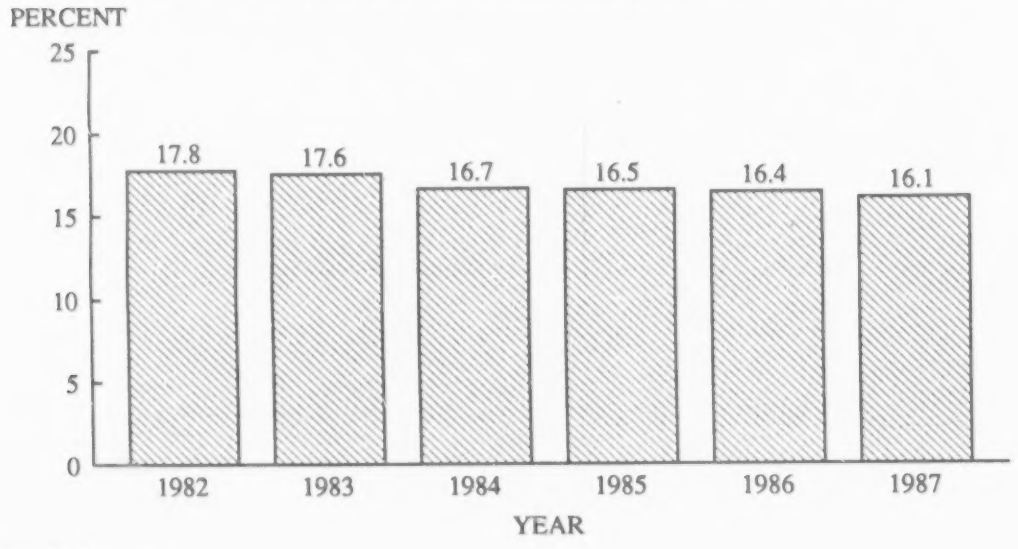
TRANSFER PAYMENTS

AS A PERCENT OF TOTAL PERSONAL INCOME



1987 Transfer Payments
$2,502 Per Capita
Total = $30.1 Billion

Transfer payments include more than welfare subsidies. They are payments to persons from both government and business for which services are not currently rendered. Government transfer payments include payments under the following programs: federal old age, survivors', disability, and hospital insurance; supplementary medical insurance, state unemployment insurance; railroad retirement and unemployment insurance; government and private business retirement; federal and state government-insured workman's compensation; veteran's benefits, including veteran's life insurance; food stamps; supplemental security income; and direct relief and business losses.

Transfer payments accounted for 16.1 percent of the state's total personal income in 1987 compared to 14.5 percent for the nation. Transfer payments have increased by 42.7 percent, going from $21 billion in 1982 to $87 billion in 1987.

The majority of transfer payments involve retirement and disability payments. In Florida the increase in transfer payments generally reflects the trend of the changing age structure.

The percentage of transfer payments to total personal income in Florida is higher than the national average and the Southeast in particular for two reasons. First, Florida has the highest percentage of persons over the age of 65 of any state. Second, Florida tends to have an affluent elderly population. Their income is generated from a variety of sources and not exclusively drawn from government Social Security payments as is the case with the elderly in other parts of the country.

* Metropolitan County

[1] Rank 1 = highest (range 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

* Metropolitan County

[1] Rank 1 = highest (range 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

REGISTERED VOTERS, DEMOCRATS: 1982-1988

County	Total Democrats 1982	1984	1988	Percent Change 1984-88	Rank of Change [1]	1988 Rank of Total Democrats [1]	1988 Percent of Total Voters	1988 Rank of Percent [1]	1988 White Number/Percent		1988 Black Number/Percent		1988 Total Registered Voters

* Metropolitan County

[1] Rank 1 = lowest (range, 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

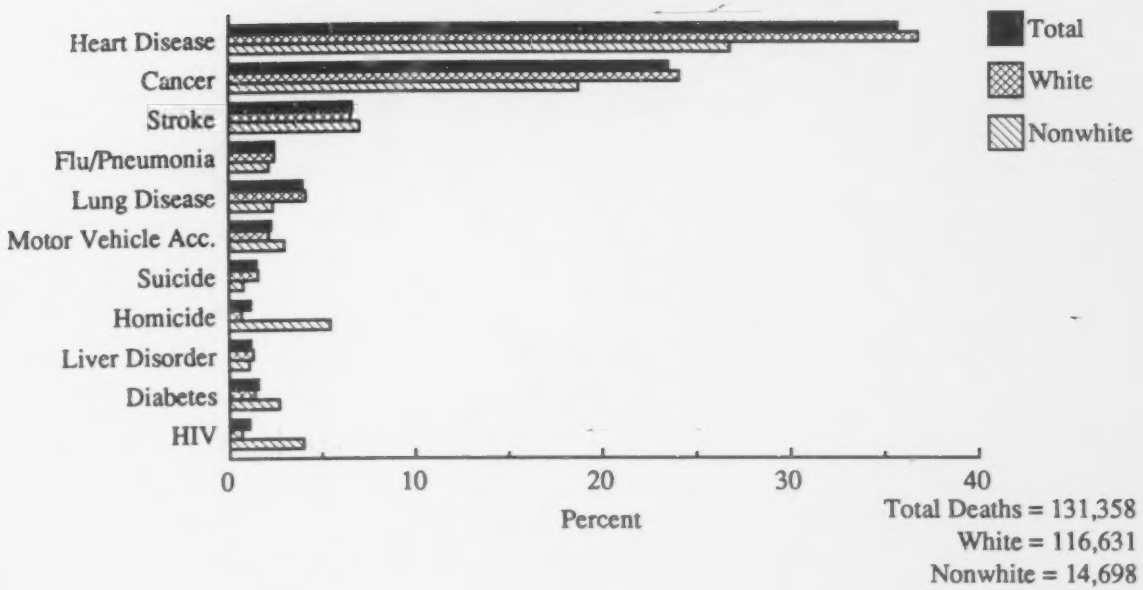
* Metropolitan County

[1] Rank 1 = lowest (range, 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

LEADING CAUSES OF DEATH

1988



The chart compares the leading causes of death in Florida for whites and nonwhites. In 1988, 131,358 people died in Florida. White deaths represented 88.8 percent while nonwhites accounted for 11.2 percent. Although the state's white population represents approximately three-quarters of the total population they accounted for almost 90 percent of all deaths. This is primarily due to the large white elderly population.

In 1988 the leading cause of death in the state for both whites and nonwhites was heart disease followed by cancer, stroke and lung disease which tend to be associated with an aging population.

Homicide, diabetes, motor vehicle accidents and Aids (HIV) all account for more nonwhite than white deaths on a percentage basis. Suicide, however, claims more whites, particularly white males.

HOSPITALS AND NURSING HOMES: 1982-1989

[1] Statistical Note: The primary use of these data is for Federal fund allocation.
Caution is urged when using these data for short-term Economic analysis.
The sum of statewide employment and unemployment may not equal labor force due to rounding.

[2] Rank 1 = lowest (range, 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

* Metropolitan County

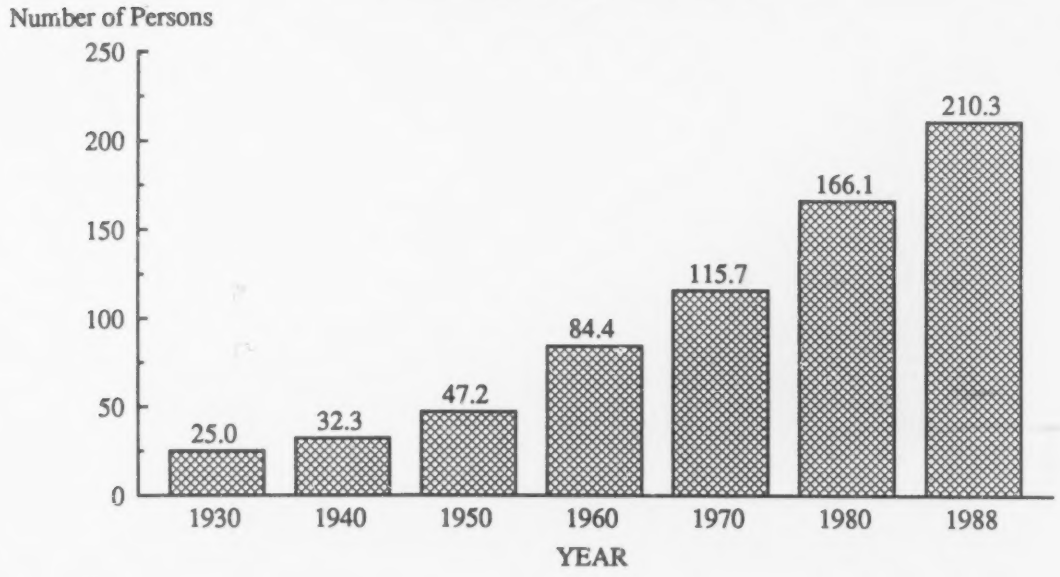
[1] Rank 1 = highest (range 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

[2] Population Per Square Mile is calculated by dividing the total county population by the total number of square miles in each county.

1 square mile = 2.59 square kilometers

POPULATION DENSITY: 1930-1988

Persons per Square Mile



With 54,154 square miles of land and 4,511 square miles of water Florida ranks 25th in size among all 50 states. In 1988, with 210.3 persons per square mile the state ranked 9th for the highest population density.

Not only has Florida experienced a tremendous increase in population, but population density as well. The information in the graph shows the number of persons per square mile in the state from 1930 to 1988. In 1930 there were only 25 people per square mile, however, by 1988 there were 210.3 persons per square mile, a 741.2 percent increase in 58 years.

According to the Census Bureau, Florida has 19 Metropolitan Statistical Areas (MSA's) and within these 19 areas are 32 counties. The remainder of the state's 35 counties are considered to be nonmetropolitan counties. In order to obtain metropolitan status a county must have a city of 50,000 located inside a county that has 100,000 residents.

Florida's Metropolitan Areas tend to be connected together with the exception of the Tallahassee and the Panama City Metropolitan Statistical Areas. However, with the addition of only one county (Jackson) the Tallahassee MSA will become contiguous with the Panama City MSA and the Dothan, Alabama MSA.

In the not too distant future a huge, densely settled, consolidated metropolitan area will extend northward from Miami and eastward from Jacksonville across the Panhandle to Mobile. The metropolitanization of North Florida is well under way and with it a continued increase in population density.

TIMBERLAND BY STAND-SIZE CLASS AND LAND CLASS: 1987

* Metropolitan County

[1] Rank 1 = highest (range 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

[1] Rank 1 = highest (range 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

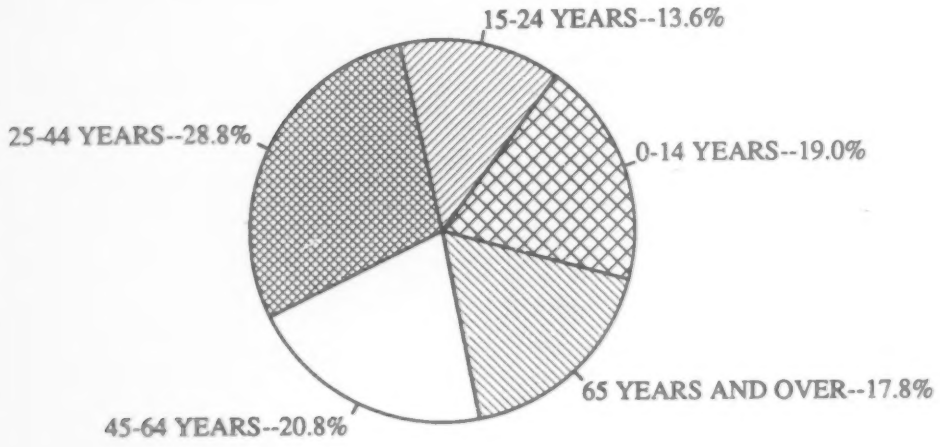
POPULATION BY AGE: 1988



TOTAL 1988 POPULATION: 12,335,000

In 1988, 17.8 percent of the state's population was over 65 years of age. Approximately one-fifth were in the 45 to 64 age category. Almost 29 percent were 25 to 44 and 13.6 percent were 15 to 24 while one fifth were under 14.

Changes in the age structure have far-reaching social and economic effects because older people frequently are no longer active in the labor force and generally have different needs than the rest of the population. These include specialized health care, appropriate housing, financial assistance, estate planning, recreation and leisure-time facilities.

Research has shown that older residents frequently have higher voter participation rates than do young people. Older voters are more likely to be concerned with economic or "pocket book" issues since they usually live on fixed incomes. As a result, school bond referendums may likely face stiff opposition from the older segment of the population. The decreasing percentage of young people signals the beginning of labor shortages that will significantly affect American business activity in the near future.

There are great differences in the age structure of Florida's population when examined by race. The median age for whites is 37.4 years and 24.1 years for blacks. The reason for this disparity is higher birth and homicide rates and the overall lower life expectancy of the black population. Differences in age might seem unimportant at first glance, but they reflect other more serious problems faced by Florida's black population; namely, births to unwed mothers, high homicide rates and health and economic problems which limit life expectancy.

The aging of the population will cause a dramatic increase in the number of elderly poor as people live longer than their retirement savings can support them or as they age to the point where they need long-term professional care. The public sector will increasingly be called upon to provide humane care for the growing numbers of poor and ill older persons unable to afford medical care.

* Metropolitan County

[1]
Rank 1 = highest (range 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

RACE; OTHERS THAN WHITE OR BLACK AND PERSONS OF SPANISH ORIGIN: 1970-1980
MALES AND FEMALES: 1980

* Metropolitan County

[1] Rank 1 = largest (range, 1-67) - When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

[2] Projections are based on different sets of assumptions regarding the growth of a county. In this table the projections represent the middle or medium series.

PERCENT CHANGE IN TOTAL POPULATION: 1930 - 2000

County	Percent Change										Rank of Percent Change [1]

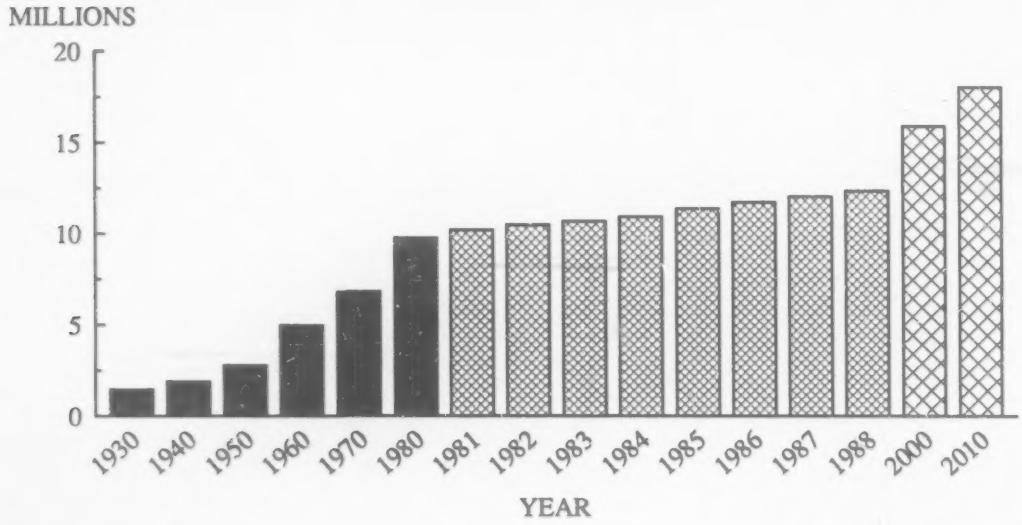
POPULATION GROWTH: 1930-2010*



* 1981-1988 Estimated
2000 & 2010 Projections

Percent Change in Population
1930 - 1988 = 740.1%
1988 - 2010 = 45.9%

Florida's population has increased every decade since the 1930's. The state's early growth was characteristic of many urban areas in the South which have historically attracted large numbers of people who left farming and declining rural areas and moved to the cities. The state's recent growth, however reflects the dynamic, vibrant economy that exists in Florida's urban centers. During the 1980 to 1988 time period Florida's total population grew by 26.6 percent, making it the fourth fastest growing state in the nation. In terms of numerical growth Florida ranked third and the state has the fourth largest population of any state.

Population changes three ways: people are born, they die or they move. During the 1980 to 1989 time period 88.1 percent of the state's population growth was due to new residents. In fact, in-migration is so important to the state's population growth that 12 counties have had more deaths than births! Yet, all with the exception of Pinellas County have grown by more than the state average.

Growth makes present and future planning challenging. Population growth affects business patterns, schools, health care and housing construction as well as the overall social and economic vitality of the community. A rapidly growing population complicates long range development unless solid and broadbased planning becomes an integral part of a community's future directions. Exceptionally high rates of growth have resulted from retirees whose presence creates additional growth from the emerging service-dominated economy.

New people moving into a community can cause numerous problems for decision makers attempting to provide services to both new and long-term residents. New residents frequently have different attitudes, values, and beliefs than local people, and in some cases these differences may lead to community conflict. New residents also have different developmental priorities than long term residents which may present difficulties in achieving consensus regarding local needs.

New residents, however, can bring new capital and opportunities and create jobs in their host communities by their very presence. Gas stations, dry cleaners, restaurants, grocery stores, and the service economy in general benefit from the influx of new residents. Striking a balance, however, in the effects of growth from new people can take time and effort, especially in anticipating the nature and scope of both short and long term community needs.

* Metropolitan County

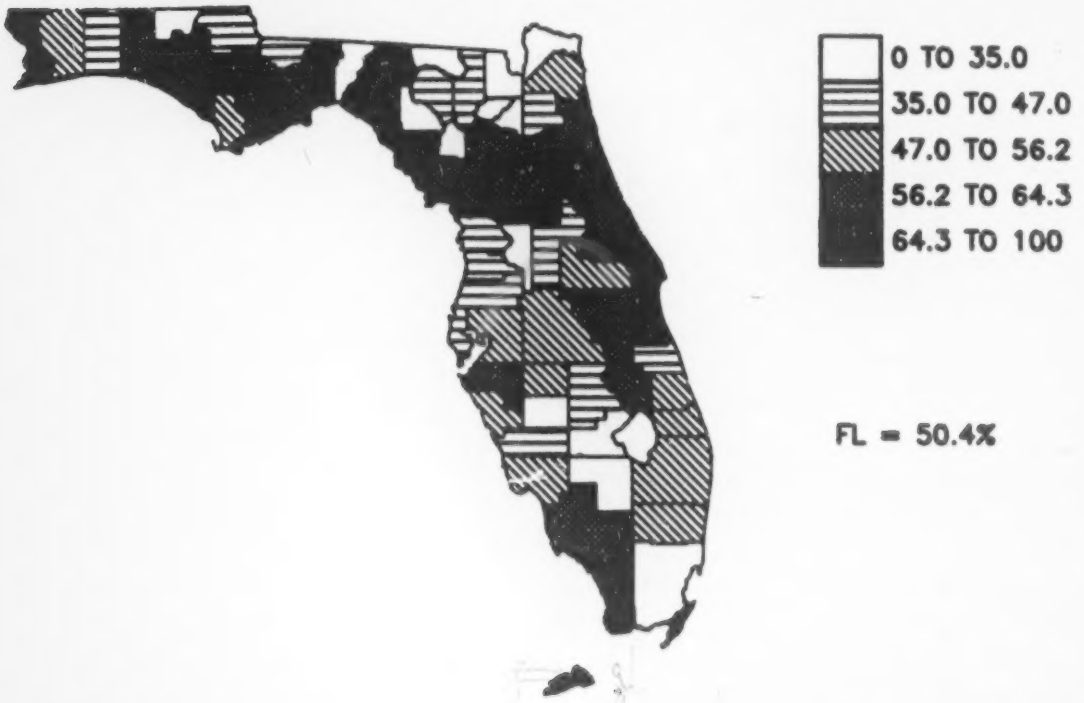
Represents an increase or decrease from a zero base

1
Rank 1 = lowest (range, 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

ALCOHOL RELATED TRAFFIC FATALITIES: 1988

Percent of Total Traffic Fatalities



The map shows 1988 alcohol related traffic fatalities as a percentage of all traffic fatalities on a county-level basis. Tragically, 50.4 percent of all traffic fatalities were alcohol related. On a county basis the percentage ranged from a low of 0 in Lafayette, Hamilton and Union counties to a high of 100 percent in Liberty.

Looking at the distribution by county the pattern which emerges shows that most of the counties in the high category (64.3% to 100%) of alcohol related traffic fatalities tend to be located in North Florida. In 1988, 30.8 percent of the counties in the high category were metropolitan and 69.2 percent were nonmetropolitan.

Since 1986, 4715 people have died as a result of drinking and driving on a state wide basis. From 1986 to 1988, however, alcohol traffic related deaths decreased by 2.4 percent.

* Metropolitan County

[1] Rank 1 = highest (range, 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

[2] Totals include revenue outside the computer system.

* Metropolitan County

[1] Rank 1 = highest (range, 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

[2] Includes revenue outside the computer system

* Metropolitan County

1 Events occurring to Florida residents regardless of the place of occurrence.

2 Rank 1 = highest (range, 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

LIVE BIRTHS TO UNWED MOTHERS (RESIDENT): 1986-1988[1]

County	Total Number			Percent Change in Total	1988								
					White	Non-White	Percent of Total Unwed		Percent of Unwed Births to Total Births Within Racial Groups			2 Number Unwed Teenage Births	Percent Teenage of Total Unwed
	1986	1987	1988	1986-88	Number	Number	White	Non-White	Total	White	Non-White

* Metropolitan County

[1] Rank 1 = lowest (range, 1-66), [2] (range, 1-67)

[3] Rank 1 = highest (range, 1-67)
When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown, but different ranks.

NOTES

In every table counties with an asterisk (*) beside their name are metropolitan counties.

A metropolitan county is a county that is part of a Metropolitan Statistical Area (MSA). All other counties are non-metropolitan counties. In 1990 Florida had 32 metropolitan and 35 nonmetropolitan counties.

The general concept of a metropolitan area is one of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus.

Each MSA has one or more central counties containing the area's main population concentration: an urbanized area with at least 50,000 inhabitants. An MSA may also include outlying counties which have close economic and social relationships with the central counties.

Page 1 **AGRICULTURE**
Farms, Farm Size and Age of Operator: 1969-1987

1
A farm, as defined for the 1974, 1978, 1982 and 1987 censuses, is any place from which $1000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

The previous definition used for the 1959, 1964, and 1969 censuses counted a farm as any place with less than 10 acres from which $250 or more of agricultural products were sold or normally would have been sold during the census year, or any place of 10 acres or more from which $50 or more of agricultural products were sold or normally would have been sold during the census year.

Page 7 **CRIME**
Offenses Reported: 1987

3
Percent Cleared: For crime reporting purposes, a crime index offense is cleared when a law enforcement agency has identified the offender, there is enough evidence to charge him and he is actually taken into custody. The arrest of one person can clear several crimes or several persons may be arrested in the process of clearing one crime.

Crime solutions are also recorded in exceptional circumstances when some element beyond law enforcement control precludes formal charges against the offender.

Pages 11-12 **ECONOMICS**
Establishments by Industry: 1987

2
Nonclassifiable establishments include establishments, typically new businesses, that cannot be classified in any major industry group because of insufficient information.

NOTES

Page 24 **EDUCATION**
Graduates, Dropouts, Non-Promotions: 1988-89

4

$$\text{Crude Dropout Rate} = \frac{\text{Total Dropouts}}{\text{Total Enrollment}} \times 100$$

Page 18 **ECONOMICS**
Transfer Payments: 1982-1987

1

Transfer payments to persons are income flows from both government and business -- for which services are not currently rendered. Government transfer payments include payments under the following programs: federal old age, survivors', disability, and hospital insurance; supplementary medical insurance; state unemployment insurance; railroad retirement and unemployment insurance; government retirement; federal and state government-insured workman's compensation; veteran's benefits, including veteran's life insurance; food stamps; black lung payments; supplemental security income; and direct relief. Government payments to non-profit institutions, other than for work under research and development contracts, are also included. The principle business transfers are liability payments for personal injury, corporate gifts to non-profit institutions, and consumer bad debts.
